My-Com
Output options:
a) Standard
b) Amplified

a) Standard execution
2-wire mechanical
Normally closed (NC)
No LED possible

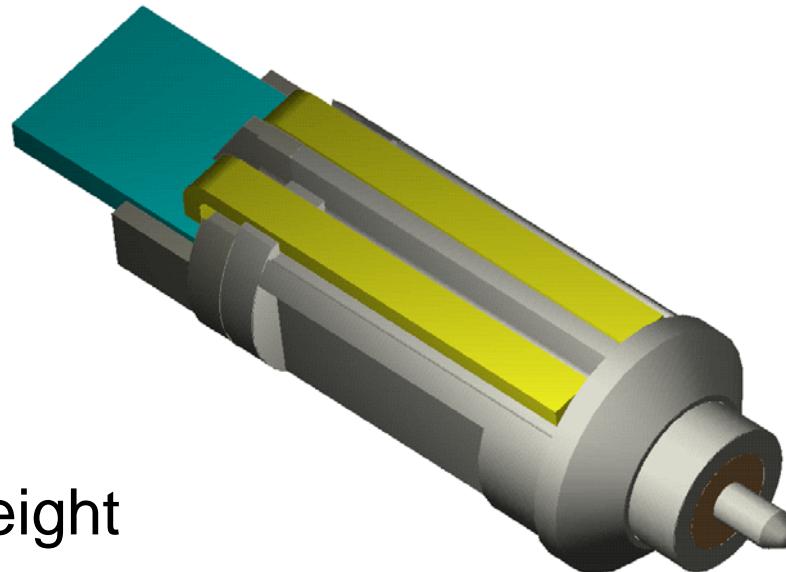

b) Amplified execution
3-wire NPN/PNP
Normally open (NO)
Possible with LED

- Standard execution without electronics
- Normally closed (NC) mechanical contacts
- Max supply voltage 15 V DC
- Max load current 2 mA
- Excessive load currents create sparks which leads to deterioration of contact surfaces
- On-resistance of closed contacts increases
- Repeat accuracy and performance deteriorate
- Lifetime of My-Com's decreases

- 3-wire execution with integrated electronics
- Normally open contacts (NO)
- 5 - 36 VDC supply voltage
- Max load current 50 mA
- Free running diode integrated
- Optional LED output state indicator
- Not short circuit proof!

The My-Com precision switch

My-Com tactile probe

- Printing industry
- Double sheet control
- OFF status:
just one paper there
- ON status:
2 or more papers there

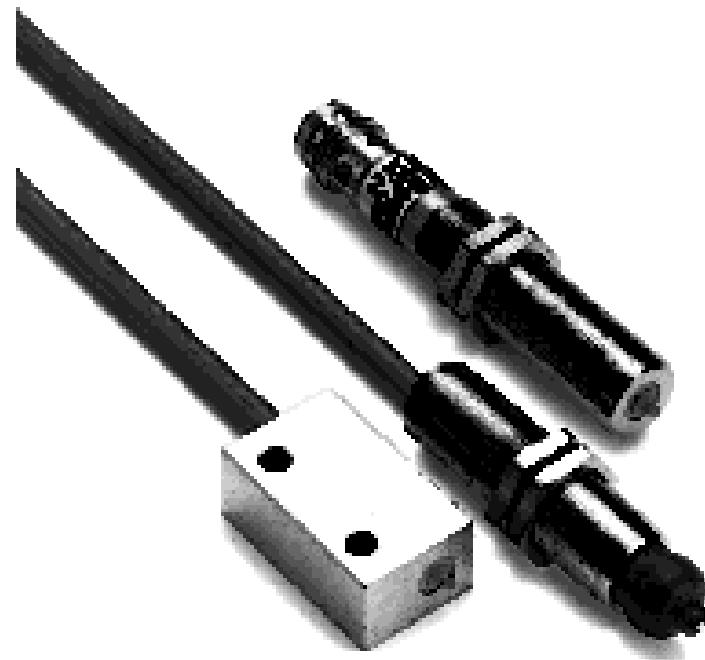

The printing media is fed through between a pivoting roll (1) and a second roll underneath. Roll (1) is mechanically connected with the My-Com. The Operator adjusts screw (2) so that the My-Com is off with one single sheet only. If there are 2 or more sheets there the My-Com triggers an alarm.
